

Kleentec Sea Kleer Window Safety System - Safer Operation. Cleaner Windows. Lower Costs.

Ten years of research and development stand behind the **Kleentec Sea Kleer Window Safety System** - a process without equal in any weather.

Safety - Safer operation because there's crystal clear vision through ALL windows ALL the time.

Protection - Cleaner windows because dirt and salt are washed away from their non-stick surface.

Durability - Lower costs due to the longevity and maintenance free properties of the product.

Yacht owners have been impressed by the system's effectiveness, simplicity, and how the professional application on their boats has generated significant cost savings as well as enhanced safety. This is achieved by the increased visibility from all the windows, no matter what the weather or condition of the sea.

In addition to yacht owners, significant orders have been received from major shipping companies, tug companies, pilots, and other commercial operations.

At the heart of the system is state-of-the-art chemistry which bonds an invisible non-stick polymer coating to the glass, creating an impenetrable barrier against any kind of dirt, including rust staining, salt spray, hard water and/or mineral staining. Anything that does come to rest on the surface is rinsed away by rain, more spray, or routine boat soaping time after time.

Kleentec Sea Kleer Window Safety System makes bridge window wipers redundant, improves visibility and increases safety, while saving time and money on cleaning.

Kleentec Sea Kleer Window Safety System is marketed by its developers who have links to an international network of specialists who can reliably treat any window exposed to the elements. They bring crystal-clear vision to staterooms and other public areas, enhancing passengers' perception of a quality ship.

Say good-bye to cleaning products of the past... And say hello to the most advanced window protection there is.

Sea Kleer Window Safety System will bring an end to those nasty water spots as water won't just bead up... it will run off in sheets!

System developer Nigel Whitaker says: "This is not glass cleaning; it is 21st Century vision engineering."
